**THE LANGUAGE OF COLOR:**

HUE and COLOR are used interchangeably.

VALUE is a term that refers to the lightness or darkness of a color.

TEMPERATURE is the perception of warmth or coolness of a color.

INTENSITY is about the purity or brightness of a color. Intensity sets the mood in a color scheme.

WHITE is versatile (like a blank canvas); it's a true neutral. It can brighten a room and expand the sense of space. It can also give a visual relief from strong color(s).

UNITY is a fundamental design principle that refers to the idea of creating visual harmony and cohesion in a space. It's a complex principle that involves organizing design elements in a way that makes them appear to belong together and form a cohesive project.

BALANCE is a Principle of Design and is Key in the Kitchen: When we repeat certain materials, patterns, colors, shapes or metals throughout the kitchen, we can help create a sense of unity. It's important that the space doesn't become visually overwhelmed with too many different elements. A harmonious feel in the kitchen is our goal-where no single element overpowers the others.

**ELEMENT OF DESIGN: Color**

Question: What is the 60/30/10 rule with color?

Answer: When you choose a color palette, 60% of the palette is dedicated to the dominant color, usually a neutral. The secondary color, or complementary, makes up 30% of the palette. A third color (accent color) is used for the remaining 10% of the design.
